

**UNLIMITED POSSIBILITIES IN THE USE OF LIGHT IN ARCHITECTURE  
ES-SYSTEM AS A PARTNER OF THE INTERNATIONAL BIENNALE OF ARCHITECTURE 2017**

**ES-SYSTEM, the leading Polish company specializing in professional lighting, is a partner of the International Biennale of Architecture 2017 (MBA). The event will be held on October 12 and 13 of this year at the "ICE" Congress Center in Krakow, which is a venue that features lighting delivered by ES-SYSTEM. Participants of this event will have the opportunity to listen to the company's representatives talk about fully using the potential of light in order to create unique spaces with their very own character.**

"The MBA is a project that involves a competition for young architects, a discussion forum, exhibitions, as well as presentations and lectures. The Biennale is an opportunity to meet the best architects in Poland and the world. As a leading company in the professional lighting technology sector which offers its products for applications like architectural lighting, ES-SYSTEM has become a partner of the event. During the MBA, we will present solutions created by our designers to meet the requirements of specific spaces," says Rafał Gawrylak, President of ES-SYSTEM.

**LIGHT IN INTERIOR DESIGN CONCEPTS**

The motto of this year's International Biennale of Architecture 2017 is "„The courtyard – a field of imagination". The goal of the project is to promote the concept of shaping public spaces which involves a multi-faceted approach to public space planning, design and management, called placemaking. One of the most important elements of this concept is the proper use of light when creating architectural designs.

"Without the proper lighting, color, form, and texture cease to exist. Architects use light to highlight the features of buildings, giving them an exceptional, unique character," explains Rafał Gawrylak, President of ES-SYSTEM. "Through the personalization of the shapes and parameters of ES-SYSTEM luminaires, designers utilize the potential of light in their projects and use it to turn buildings into true pearls of architecture," says President Gawrylak.

The International Biennale of Architecture 2017 is held at the "ICE" Congress Center in Krakow, which was equipped with 15,000 interior luminaires by ES-SYSTEM in 2014. The lighting systems designed by our company were customized to suit the interiors of the facility. As much as 90% of the luminaires delivered to the most important rooms were LED lighting systems. ES-SYSTEM used the following lighting systems at the "ICE": RODIA LED, LUNA, S6000 LED and DN LED. In order to prevent the luminaires from affecting the acoustics and sound reception, the ES-SYSTEM lighting was subjected to special acoustic testing that was conducted at the AGH University of Science and Technology in Krakow. All supplied lighting systems meet the latest EU energy efficiency requirements, guaranteeing low electricity costs.
